AMENDMENT

Sir:

Responsive to the Office Action mailed April 1, 1992,
consideration of the following amendment and remarks is
respectfully requested.

In the Claims

Please add the following claim:

63. A method of selectively inhibiting in vivo
synthesis of one or more specific targeted proteins without
substantially inhibiting the synthesis of non-targeted proteins,
comprising the steps of:

synthesizing an oligodeoxyribonucleotide having a
nucleotide sequence substantially complementary to at least a
portion of the base sequence of messenger ribonucleic acid coding
for said targeted protein.
